

Lifetime LASIK Program

The lifetime LASIK program is our commitment to exceptional care to patients throughout their lifetime. Our dedication to quality is ultimately measured by your satisfaction. Confidence in our doctors and staff to deliver that quality, and our desire to ensure your satisfaction, drives us to proudly present our Lifetime LASIK Program.

Eligibility

- You are eligible for the Lifetime LASIK Program if you are treated at an Indiana LASIK Center for laser vision correction of myopia, hyperopia, and/or astigmatism. Eligible retreatments will be performed at a cost of \$399/eye.
- Prior to your procedure with Indiana LASIK Center your myopic correction is between -0.50 D and -12.00 D or $+0.50$ to $+5.00$ with no greater than 4.00 D of astigmatism, and your best-corrected acuity is 20/40 or better.
- You have completed the course of post-treatment care, including all follow-up visits, as prescribed by your doctor.
- Following completion of all your prescribed post-treatment care, you have annual comprehensive eye exams with an Indiana LASIK Center affiliated doctor. You (or your insurance) are responsible for the doctor's regular annual fees.
- Any refractive condition of $.75$ Diopters greater than your targeted outcome that exists or develops after the procedure may be retreated at a cost of \$399/eye provided your doctor agrees that an enhancement is medically safe, appropriate, and has a high probability of correcting your vision to at least 20/40 (enabling you to pass the eye test for your driver's license exam without corrective lenses). The Indiana LASIK Center Medical Review Board will review any disputed cases.

Enrollment

Enrollment is automatic when your initial laser vision correction for myopia, hyperopia and/or astigmatism is completed at an Indiana LASIK Center. It's that easy! Your doctor will maintain the appropriate records to determine your eligibility.

Exclusions

There are certain exceptions and conditions when additional laser vision correction will not be advised and will not be covered by the Lifetime LASIK Program.

- Patients who fail to comply with the guidelines and recommended course of treatment by their doctor, including annual comprehensive eye exams as previously defined.

Continued

- Patients whose affected vision is a result of trauma to the eye.
- Patients with diseases such as diabetes, active autoimmune, and collagen vascular disorders.
- Patients whose cornea is too thin for successful retreatment.
- Patients who had RK, ALK, PKP (corneal transplant), or any other previous Laser vision correction procedure performed at a site other than an Indiana LASIK Center.
- Patients diagnosed with any ocular disease (cataracts, glaucoma, diabetic retinopathy, etc.), which would compromise a successful retreatment.
- Patients seeking an enhancement as a result of presbyopia (a normal aging process in which the muscles controlling the lens lose their elasticity).
- Patients who develop drug induced myopia.
- Patients who develop myopia as a result of pregnancy or nursing; (retreatment will be considered after pregnancy or nursing period when vision is stable).
- Patients with pre-treatment degrees of myopia greater than -12.00 D; patients whose pre-treatment astigmatism was greater than 4.00 D; patients with pre-treatment degrees of hyperopia greater than $+5.00$ D.
